DETAILED ACTION

Response to Amendment

1. The Examiner acknowledges the amended claims filed on December 22, 2008.
Claim 1-40, 48 and 54 have been canceled.

Response to Arguments

2. Applicant's arguments, see pages 7 and 8, filed December 22, 2008, with respect to the rejections made on **claims 41-47, 49-53 and 55-60** have been fully considered and are persuasive. The rejections of rejections have been withdrawn.

Allowable Subject Matter

3. **Claims 41-47, 49-53 and 55-60 (Renumbered as 1-18)** are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter:
5. **Regarding claim 41 (Renumbered as 1)**, the main reason for indication of allowable subject matter is because the prior art fails to teach ore reasonably suggest, including all the elements of the present claim, that if selection of the first indicium by a user is detected, determining whether an impaired vision mode is set; if an impaired vision mode is determined to be set, performing steps of: superimposing the first

indiciu on the second indicium; magnifying the first indicium to conceal an entirety of the second indicium; and reducing an opacity of the first indicium so that the entirety of the second indicium is viewable through the first indicium. Specifically with regards to the part that related determining whether an impaired vision mode (as defined in the Specifications as a mode that would enable a person that is visually impaired to see the indiciums in the display of the camera based on a particular mode) is set if selection of the first indicium by a user is detected. The prior art of record teaches a similar method of adjusting how the indiciums are displayed based on a particular mode, however fails to teach that the determination of whether an impaired vision mode is set occurs if a selection of the first indicium by a user is detected. So that the modification of the selected indicium occurs after occurs after determining that the impaired vision mode is set.

6. **Regarding claim 49 (Renumbered as 8),** the main reason for indication of allowable subject matter is because the prior art fails to teach ore reasonably suggest, including all the elements of the present claim, that if selection of one of the first menu item and the second menu item is detected in the detecting step, determining whether an impaired vision mode is set; if an impaired vision mode is determined to be set in the determining step, performing steps of: concealing an entirety of the other one of the first menu item and the second menu item with a magnified version of the selected one of the first menu item and the second menu item; and reducing an opacity of the magnified version of the selected one of the first menu item and the second menu item so that the

entirety of the other one of the first menu item and the second menu item is viewable. Specifically with regards to the part that related determining whether an impaired vision mode (as defined in the Specifications as a mode that would enable a person that is visually impaired to see the indiciums in the display of the camera based on a particular mode) is set if selection of the first indicium by a user is detected. The prior art of record teaches a similar method of adjusting how the indiciums are displayed based on a particular mode, however fails to teach that the determination of whether an impaired vision mode is set occurs if a selection of the first indicium by a user is detected. So that the modification of the selected indicium occurs after occurs after determining that the impaired vision mode is set.

7. **Regarding claim 55 (Renumbered as 13)**, the main reason for indication of allowable subject matter is because the prior art fails to teach or reasonably suggest, including all the elements of the present claim, that if selection of the first icon is detected, determining whether an impaired vision mode is set; if the impaired vision mode is determined to be set, performing the steps of: moving the first icon from the first portion to a location proximate to the second portion; magnifying the first icon to completely overlap the second icon; and reducing an opacity of the first icon so that an entirety of the second icon is viewable through the first icon. Specifically with regards to the part that related determining whether an impaired vision mode (as defined in the Specifications as a mode that would enable a person that is visually impaired to see the indiciums in the display of the camera based on a particular mode) is set if selection of

the first indicium by a user is detected. The prior art of record teaches a similar method of adjusting how the indiciums are displayed based on a particular mode, however fails to teach that the determination of whether an impaired vision mode is set occurs if a selection of the first indicium by a user is detected. So that the modification of the selected indicium occurs after occurs after determining that the impaired vision mode is set.
